

Country:	United Kingdom
Input material:	Mattresses
Throughput:	over 200 units pr/hr, pr/machine < 50 mm
Scope of delivery:	2 x XR3000C with frequency inverter

“We have tried all the other shredders. The only machine that can continually process this difficult mattress waste stream and provide the liberation required is the UNTHA XR3000C. In the process of using the machine we have also identified savings in powerusage and also a better wearratio on parts than was expected. The UNTHA is the only shredder we would use for this application.”

Martin Price (Project Manager)
