

„This UNTHA technology makes us 70 % more economical than if we were using diesel power and 30 % more economical than the conventional star-delta drive. The low speed nature of this shredding system also keeps the noise of our pellet production at a very low level, as well as producing a very low amount of fine particles.“

Thomas Breitsamer (Managing Director)

Country:	Germany
Input material:	Waste wood
Throughput:	35 t/h < 120 mm
Scope of delivery:	XR3000C mobil-e
