

“We were looking for a solution that would allow us to turn waste into a new resource. Thanks to the professional support of Ecotec Solution we were able to identify the UNTHA XR3000XC shredder as the most suitable technology to support our development and growth plans. With this machine we are able to produce high quality RDF for cement kilns and waste-to-energy plants. We have received very positive feedback about the UNTHA XR shredders from other plants and the savings in energy and wear costs were a crucial part of our decision. Furthermore, consultancy, planning and support during the installation from Ecotec Solution were crucial for the realization of this project.”

Achille Mattucci (Owner)

Country:	Italy
Input material:	Post-consumer plastic waste
Throughput:	up to 6 t/h < 20 mm
Scope of delivery:	XR3000XC with frequency inverter
